

Maintenance and service are essential

Failure to perform the necessary cleaning and maintenance will result in long-term devaluation of the solar shading system.

Soiling of the slats and the lift tapes and bottom weights significantly impairs the blind's function and may lead to corrosion damage.

Specifications

For the cleaning of

50, 60, 70, 80, 90 and 100 mm slats

Weight of handset/gear/brushes	3.5 kg
Weight of electric/water unit	10.5 kg
Power supply	230V/50Hz
Power consumption	0,15kWh
Water connection	2 – 5 bar
Water consumption	5,5 l/min.

Area output (depending on blind accessibility)

**1m² in
2 minutes**

AJR professional 2.0

Cleaning is carried out **directly on site on the facade** in an environmentally friendly manner that does not involve chemicals.

The modular system offers variable gear units and brush sets which can be selected according to requirements and perfectly match **slat widths of 50 –100 mm**.

Rotating brush rollers clean the tops and bottoms of the slats simultaneously. Lift tapes and ladder braids are also cleaned, ensuring that value is maintained and that the blinds function properly.

The optional use of **fully demineralized water** ensures residue-free cleaning and drying of the slats.

Cleaning in extreme conditions

The cleaning of external venetian blinds **directly on the building** is possible even at significant heights. Cleaning can be performed from a scaffolding, working platform, or facade access system or by industrial climbers.

AJR professional 2.0 can be used even in difficult conditions.
